EDUCATION

Universitas Indonesia, Faculty of Computer Science

Depok, Indonesia

B.Sc. in Computer Science • GPA: 3.10 / 4.00

Expected Graduation: July 2027

- **Relevant Coursework:** Data Structures & Algorithms, Databases, Operating Systems, Computer Networks, Advanced Programming, Platform-Based Programming, Object-Oriented Programming (**Java**), Security-Driven Software Development, Software Engineering, Discrete Mathematics, Statistics & Probability, Human-Computer Interaction.

EXPERIENCE

PT International Biometrics Indonesia

Jakarta, Indonesia

Software Engineer Intern

Jun 2026 – Present

- Engineer analytics infrastructure for the national **facial-recognition middleware** behind Indonesia's **e-KTP** program, the identity backbone for **170M+ citizens** and the **KYC** verification layer that banks and government services rely on, running **277M+** identity checks against the 16-digit **NIK**.
- Migrated dashboard analytics off the live **OLTP** database that serves real-time identity verification, a national critical path, onto a **Change Data Capture** pipeline on **Debezium**, **Apache Kafka**, and **ClickHouse**. Load on the production database dropped to near zero and data freshness improved from roughly ten minutes to seconds.
- Validated the pipeline across **MySQL**, **PostgreSQL**, and **Oracle** with **Dockerized** proof-of-concept harnesses and a nine-check contract suite covering event ordering, restart recovery, and live schema changes; the stack held green through more than **40 hours** of continuous load.
- Masked every **NIK** with **SHA-256** at the capture boundary so no raw national-identity data leaves the source, satisfying Indonesia's data-protection law, and designed a **high-availability** ClickHouse sink with deduplication, a dead-letter queue, and a recovery target under **five minutes**.

Kementerian Transmigrasi Republik Indonesia

Jakarta, Indonesia

Software Engineer Intern

Jul 2025 – Aug 2025

- Automated the training-evaluation workflow for a national government ministry with **Google Apps Script** across Forms, Sheets, and Slides, replacing manual file handling, scoring, and certificate delivery.
- Cut the administrative cycle by **75%** and raised certificate output **fourfold** for a program serving more than **20 civil servants**.

PT International Biometrics Indonesia

Jakarta, Indonesia

Software Developer Intern

Jun 2024 – Aug 2024

- Rebuilt and relaunched interbio.id to **ISO 27001** standards, hardening **SSL/TLS** and delivering a modular CMS the non-technical communications team runs on its own.
- Passed an independent **penetration test** with **zero critical vulnerabilities** and doubled the team's publishing output.

Additional Experience: Backend Engineer Intern, **Systatum**, building REST APIs in **Crystal/Marten** on a distributed architecture (2026). Software Engineer Intern, **VICII**, Shopify e-commerce build (2025). Data Science Mentee, **RISTEK Fasilkom UI** (2023).

PROJECTS

Smart Invoice Reminder AI (SIRA)

sira.nashtagroup.co.id

FastAPI • React • Supabase (PostgreSQL) • Celery + Redis

2026

- Built **SIRA**, an **AI-assisted fintech** collections platform for a paying client that scores payment risk and sends reminders over email, WhatsApp, and SMS, on **FastAPI**, **React**, **Supabase**, and **Celery** with **Redis**.
- Recovered client cash faster in production: **59 clients**, **212 invoices**, average payment time cut to **3.9 days**, roughly **26 days** ahead of the 30-day norm, on **blue-green** Docker infrastructure with a **GitLab CI/CD** pipeline.

Boulder Coach, Adaptive Training PWA and AI Delivery Harness

github.com/dafandikri/boulder-coach

Next.js • React • strict TypeScript

2026

- Built an offline-first **PWA** with **Next.js**, **React**, and strict **TypeScript**, governed by an eight-step quality gate: strict-typed **ESLint** that bans **any**, **100%** branch coverage on safety logic, dependency analysis, **Semgrep**, and **Playwright**, all enforced in **CI**.

Personal Portfolio, Self-Hosted on Kubernetes

dafandikri.tech

React • Vite • DigitalOcean Kubernetes

2025

- Designed and self-hosted a **React** and **Vite** portfolio on a **DigitalOcean Kubernetes** cluster, authoring the manifests, ingress, and rolling deployments end to end.

Solemates, Secure E-Commerce Platform

Universitas Indonesia

Django • PostgreSQL • Kubernetes

2025

- Built a **Django** e-commerce platform under **OWASP Top 10** secure-coding practices, deployed to a **Kubernetes** cluster, and cleared an independent **penetration test**.

HONORS & AWARDS

1st Place, Financial Technology, Ektizo Creative Coding Competition (2019). Built a fintech prototype for simplified transactions, judged best in category.
Tech Wizard Award, Software Engineering, Universitas Indonesia (2026). Awarded to SIRA, the AI fintech collections platform now running in production.
1st Place, Ideaton Battle T-Fest, Agate & Botnar Foundation (2022). Product proposal adopted by the judges into their own application.
TOEFL ITP 587. Full professional English; every internship and project delivered in English.

TECHNICAL SKILLS & INTERESTS

Languages: Python, Go, Java, TypeScript / JavaScript, Dart, SQL, C++.

Backend: FastAPI, Spring Boot, Django, Flask, Celery, REST APIs, event-driven services.

Frontend & Mobile: React, Next.js, Tailwind CSS, Flutter (Android / iOS), PWA.

Infrastructure & Data: Docker, Kubernetes, Apache Kafka, Debezium, ClickHouse, Redis, Nginx, PostgreSQL / MySQL / Oracle, GitLab & GitHub CI/CD, Linux.

Data & AI: Pandas, NumPy, scikit-learn, AI-assisted development (Claude Code, Codex).

Practices: distributed systems, real-time data pipelines, Change Data Capture, secure coding (OWASP), automated quality gates, testing (Vitest, Playwright, Semgrep).

Spoken: English (TOEFL ITP 587), Indonesian (native). **Interests:** bouldering, competitive programming, self-hosting.
